Replaces BQ27427YZFR, BQ27427/BQ27426 have zero LiFePO4 chemistry-profile support (confirmed against datasheet -- only 4.2/4.35/4.4V Li-Ion profiles exist), BQ34Z100 explicitly supports LI-Ion and LiFePO4. Architecture changed from BQ27427's high-side integrated 7mOhm shunt to a low-side external sense resistor (R60 on the main sheet, in series between the true battery- terminal and system GND) -- SRP/SRN Kelvin-sense across R60.
